*cond* stands for logical statements. *expr* stands for an expression or a block of expressions.

## Operators

=	assignment	>=	greater or equal
+	addition	==	equals
-	subtraction	!=	unequal
*	multiplication	&	and
/	division		or
<	smaller	:	next higher scope
>	greater	\	highest scope (globals)
<=	smaller or equal		

## Functions

### Variable Functions

abs( <i>x</i> )	Absolute value
gettime()	Seconds since computer was started
if( <i>cond</i> , <i>x</i> , <i>y</i> )	If <i>cond</i> is true, <i>x</i> , otherwise <i>y</i>
max( <i>x</i> , <i>y</i> )	Maximum of <i>x</i> and <i>y</i>
min( <i>x</i> , <i>y</i> )	Minimum of <i>x</i> and <i>y</i>
mod( <i>x</i> , <i>y</i> )	Remainder of <i>x</i> / <i>y</i>
power( <i>x</i> , <i>y</i> )	$x^y$
random()	Uniform random between 0 and 1
randomgauss()	Normal random with avg 0 and sd1
round( <i>x</i> , <i>y</i> )	Rounds <i>x</i> to a multiple of <i>y</i>
rounddown( <i>x</i> , <i>y</i> )	Rounds <i>x</i> down to a multiple of <i>y</i>
roundup( <i>x</i> , <i>y</i> )	Rounds <i>x</i> up to a multiple of <i>y</i>
same( <i>x</i> )	Equality check of <i>x</i> with higher scope ( <i>x</i> ==: <i>x</i> )
sqrt( <i>x</i> )	Square root of <i>x</i>

### Table Functions

(*cond* is optional for all functions below)

average( <i>cond</i> , <i>x</i> )	Average of the numeric values
count( <i>cond</i> )	Number of (found) records
find( <i>cond</i> , <i>x</i> )	First (found)value
maximum( <i>cond</i> , <i>x</i> )	Maximum of the (found) values
minimum( <i>cond</i> , <i>x</i> )	Minimum of the (found) values
sum( <i>cond</i> , <i>x</i> )	Sum of the (found) values

## Arrays

array <i>myarray</i> [ <i>n</i> ]	Creates an array with <i>n</i> elements
<i>myarray</i> [ <i>i</i> ]	Calls <i>i</i> <sup>th</sup> element of the array <i>myarray</i>

## Conditional Statements

if ( <i>cond</i> ) { <i>exprs</i> }	If <i>cond</i> is TRUE, <i>exprs</i> are executed
if ( <i>cond</i> ) { <i>exprs1</i> } elseif ( <i>cond2</i> ) { <i>exprs2</i> }	If <i>cond1</i> is TRUE, <i>exprs1</i> are executed; otherwise if <i>cond2</i> is TRUE, <i>exprs2</i> are executed.
if ( <i>cond</i> ) { <i>exprs</i> } else { <i>otherexprs</i> }	If <i>cond</i> is TRUE, <i>exprs</i> are executed; otherwise <i>otherexprs</i> are executed

## Loops and Iterators

while( <i>cond</i> ){ <i>exprs</i> }	While <i>cond</i> is true, <i>expr</i> are executed
repeat { <i>exprs</i> } while ( <i>cond</i> );	<i>expr</i> are executed, then while <i>cond</i> is true <i>expr</i> are executed
later( <i>x</i> ) do { <i>exprs</i> }	After <i>x</i> seconds, <i>expr</i> are executed
later( <i>x</i> ) repeat { <i>exprs</i> }	Each <i>x</i> seconds, <i>expr</i> are executed
(!) Iterators are replaced with <b>for loops from version 4+</b>	
iterator( <i>i</i> , <i>n</i> )	<i>i</i> runs from 1 to <i>n</i>
iterator( <i>i</i> , <i>m</i> , <i>n</i> )	<i>i</i> runs from <i>m</i> to <i>n</i> in steps on 1
iterator( <i>i</i> , <i>m</i> , <i>n</i> , <i>s</i> )	<i>i</i> runs from <i>m</i> to <i>n</i> in steps of <i>s</i>

## Built-in Variables

### Globals

Period	Current period
NumPeriods	Total number of periods
RepeatTreatment	Repeat treatment if > 0

### Subjects

Period	Current period
Subject	Subject number
Group	Group number
TotalProfit	Total profit in treatment
Participate	Enter stage if 1, do not if 0
Leave stage	Leave active stage if 1

### Session

FinalProfit	Income without show-up fee
ShowUpFee	Show-up fee
MoneyEarned	FinalProfit + ShowUpFee
MoneyAdded	Credit given to subject
MoneyToPay	FinalProfit + ShowUpFee + MoneyAdded

## Layouts

```
!text: value1 = "Label 1"; value2 = "Label 2";
!button: value1 = "Label 1"; value2 = "Label 2";
!radio: value1 = "Label 1"; value2 = "Label 2";
!radiosequence: value1 = "Label 1"; value2 = "Label 2";
```

```
!radioline: leftvalue = "LabelLeft"; rightvalue =
"LabelRight"; numberofbuttons
!slider: leftvalue = "LabelLeft"; rightvalue =
"LabelRight"; numberofincrements
!scrollbar: leftvalue = "LabelLeft"; rightvalue =
"LabelRight"; numberofincrements
!checkbox: 1 = "Label";
!string
```

## Text Formatting

<>	Process variables inside labels
<x   layout>	Print the value of the variable <i>x</i> inside label
{\rtf ... }	RTF formatted text

### RTF Codes

\fs18	font size 18pt	\b	start bold
\tab	tabulator	\b0	end bold
\line	new line	\i	start italic
\ql	aligned to left	\i0	end italic
\qr	aligned to right	\colortbl	define colors
\qc	aligned to center	\cf1	start color 1

### RTF Example

```
{\rtf \fs21 This is \i italic \i0 and this is \b bold \b0
text }
Result: This is italic and this is bold text.
```

```
{\rtf {\colortbl;\red0 \green0
\blue0;\red255\green0\blue0;} \This is \cf2 red \cf1 and
the rest is black. }
Result: This is red and the rest is black
```

## Common Operations

Getting opponents' variable in two player games  
Opponent\_x = find(same(Group) & not(same(Subject)),x);  
Rank according to a variable number within the group  
Rank = count(same(Subject) & :x >= x);  
Conditional participation to a stage  
Participate = if(x == 1,1,0);  
Getting variable values from previous period  
x = OLDsubjects.find(same(Subject), x);

## Keyboard Shortcuts

Start treatment F5	Restart clock	Shift + F12
Stop clock F12	Break loop	Ctrl + Shift + F5
